CATACHEM ANNOUNCES AVAILABILITY OF SPECIALTY DIAGNOSTIC REAGENTS FOR VETERINARY APPLICATIONS

Bridgeport, CT Catachem, Inc. announces the introduction of new specialty diagnostic reagents for clinical veterinary applications. The addition of these reagents to Catachem's already extensive and growing line of clinical veterinary chemistry products demonstrates Catachem's continuing commitment to the specialized needs of veterinary laboratories.

Catachem's growing line of specialty veterinary reagents combine optimized convenience and stability of liquids and currently includes assays for Potassium Bromide, Beta-Hydroxybutyrate (B-HBA), Total Bile Acids, Fructosamine, Nonesterified Fatty Acids (NEFA), Plasma Free Hemoglobin (PFH), Sorbitol Dehydrogenase (SOH), Lactate, Uric Acid, and Ethylene Glycol. They feature excellent shelf life and on-board working stabilities and demonstrated precise and accurate performance. Catachem offers this specialty veterinary line in a variety of packaging options for manual and automated applications.

These reagents are suitable for use on both manual and fully automated instrumentation, with an extensive listing of applications readily available for a wide variety of chemistry analyzers. Catachem also offers individual calibration and quality control materials for support.

Catachem serves the clinical chemistry and veterinary markets with one of the most extensive product lines available. For further information, contact Catachem at 955 Connecticut Avenue, Suite 4106, Bridgeport, CT 06607.
