

CATACHEM

OEM CONTRACT MANUFACTURING

PRODUCT / SERVICE INFORMATION

Catachem, Inc. manufactures high quality, stable, clinical chemistry products for Private Label OEM business.

For over twenty years we have served the human and veterinary IVD market with FDA 510(K) approved chemistry reagents. In our FDA approved laboratories we manufacture unique formulations to meet the needs of our client diagnostic companies. Our technology includes liquid formulations with 16 to over 24 months shelf stabilities. We also manufacture dry-powder blends with two to three years shelf stability. In addition to long term stability, Catachem dry-blends are easy to dissolve (2-3minutes) and very convenient for international shipping, minimizing shipping charges and most importantly, maintaining product integrity.

We package unlabeled, finished products, as well as bulk containers following strictly the needs and requirements of our buyers.
